Routine Maintenance Schedule

| | 5/05 | 6/05 | 07/05 | 08/05 | 09/05 | 10/05 |
|--|------|------|-------|----------------|-------|-------|
| Weeds trimmed around lagoons | | | | | | |
| Grass growing on all berms of lagoons | | | | | | |
| Bait stations checked | | | | | | |
| Split tires in contained area on gravel when not in use | | | | | | |
| Any buckets, barrels, are under roof/ no rainwater & all empty | | | | | | |
| barrels outside are sealed | | | | | | |
| All skids, lumber & pipes are moved regularly & mowed under | | | | | | |
| Grass intact around silage pad | | | | | | |
| Entire production area mowed <u>every 3 weeks</u> | | | | r ^a | | |
| Plastic used to cover silage disposed of properly (dumpster) | | | · | | | |
| Leachate liquid level around silage pad is below the curb | | | | | | |
| Any grass damaged by heavy equipment repaired | | | | | | |

Confined Animal Feeding Operation Emergency Spill Response Plan

(Required Information)

A spill response plan similar to the one below must be completed, maintained and kept on file at the farm. Please include a copy of the farmstead map with your plan. For detailed information on what must be included in the plan, refer to page 23 of the Guidance Manual.

| Farm ID No. (Log# | 4), #6068 | (or) Approval Nu | umber, AW#4 | 859 | | |

SPILL ANTICIPATION & ASSESSMENT:

(Discuss possible spill sites and problems. Examples appear on the back of this page. Please include a location map for reference.)

| SITE ASSESSMENT | RESPONSE | CLEANUP/REPAIRS | | |
|--|---|--|--|--|
| 1 Animals burrowing in sidewall of lagoon | Rid infestation by trapping animals, or chemically treat with zinc phosphide | Bring extra soil in and compact damaged area | | |
| 2 Unable to keep lagoon at proper freeboard level due to rain | Use backhoe to push berm up to control breaching until it can be pumped *Contact IDEM within 2 hours of spill | Pump lagoon as soon as possible | | |
| 3 Irrigation line breaks during dragline application, spilling manure into the field | Radio to pump operator to shut pump down, contain spill perimeter with backhoe excavation, straw bales, etc. | Repair line, remove excess product with loader, land apply with gated box spreader | | |
| 4 Manure transport turns over during 2 mile run to application site, leaking manure into ditch | Mobilize local backhoe to contain leaking product at site, stop any flows in ditch, contact emergency response & sheriff. Begin pump off process to another tank | Remove excess product with loader, land apply with gated box spreader | | |
| 5 | | | | |
| 6 | | | | |
| 7 | | | | |
| 9 | | | | |

| 10 | | |
|---|---|--|
| 11 | | |
| 12 | | |
| 13 | | |
| 14 | | |
| Examples: Here breeks during transport spilling | Contain spilled manure with on-site | Repair hose and pump out water and |
| Hose breaks during transport, spilling manure into ditch | materials such as a backhoe, hay bales, etc. | manure in ditch and land apply contained manure. |
| Broken water pipe overflows pit to a small creek down grade | Use backhoe to push dirt pile into creek to stop flow | Call neighbor, borrow irrigation pump to remove waste water to wheat stubble, incorporate, remove dirt pile in creek |
| Excessive rain on manure stockpile causing runoff toward open tile in field | Shut off water and repair pipe Cover pile with large tarp, use backhoe to divert runoff from tile into low area in field | Pump waste out if necessary. Spread or move pile when possible and incorporate into soil. |
